[What is Connective Tissue? \(with pictures\) - wisegeek.com](#)

Loose connective tissue includes areolar, adipose, and reticular tissue. Areolar tissue is a mesh-like tissue with a fluid matrix that supports the epithelium ; tissue that makes up the skin and other membranes.

[Connective Tissue Disease: Types, Symptoms, Causes](#) Connective tissue disease refers to a group of disorders involving the protein-rich tissue that supports organs and other parts of the body. Examples of connective tissue are fat, bone, and cartilage.

[Connective Tissue Types and Examples - ThoughtCo](#) Dense connective tissue can be categorized into dense regular, dense irregular, and elastic connective tissues. Dense regular: Tendons and ligaments are examples of dense regular connective tissue. Dense irregular: Much of the dermis layer of the skin is composed of dense irregular connective tissue.

[Connective tissue - Wikipedia](#)

Connective tissue. Connective tissue (CT) is one of the four types of biological tissue in animal body that supports, connects or separates different types of tissues and organs. It develops from the mesoderm. The other three types are epithelial, muscle, and nervous tissue.

[7 Types of Connective Tissue | Sciencing](#)

Connective tissues are specialized tissues, which provide support and hold the body's tissues together. Connective tissue is made up of a small fraction of cells and a majority of extracellular substance which keeps the cells separated.

[Connective tissue | Britannica.com](#)

Connective tissue is a mesenchyme that fastens together other more highly organized tissues. The solidity of various connective tissues varies according to the consistency of their extracellular matrix, which in turn depends on the water content of the gels, the amount and type of polysaccharides.

[Connective Tissue Disease | Cleveland Clinic](#)

A connective tissue disease is any disease that affects the parts of the body that connect the structures of the body together. Connective tissues are made up of two proteins: collagen and elastin. Collagen is a protein found in the tendons, ligaments, skin, cornea, cartilage, bone, and blood vessels.

[Connective Tissue: Types, Functions & Disorders - Video ...](#)

Connective tissue is an essential part of a body. It helps hold our body together, supports other tissues and even transports substances. Learn more about its importance and
